## MONTHLY NEWSLETTER

01ST JUNE, 2024

This past month, we were privileged to participate in the Offshore Technology Conference (OTC) in Houston, Texas. The event took place at the famous venue in town, the NRG stadium, and lasted almost four full days. Our team members showcased some of our preeminent grade 100 items. These include lifting

chain, clevis foundry hook, eye foundry hook, master link, connecting link, oblong link, clevis grab hook, and others.

Our team particularly enjoyed meeting industry leaders in the oil and gas industry and beyond. These companies include Aramco, Appleton, Petrobras, and TNR Offshore, among others. Our team expressed that they enjoy hearing the market trends in a transactional manner. More precisely, our team discussed manufacturing trends while the customers shared product information from a user's perspective. The informative dialogue exchange opened up opportunities for further collaborations, which we look forward to.

This month, we eagerly look forward to exhibiting at the TowXPO in Dallas Fort Worth, Texas. TowXPO provides a unique platform for major manufacturers to connect and collaborate with towing, trucking, and auto-hauling companies. The event aims to facilitate direct relationships between manufacturers and resellers, wholesalers, and end-users. While our company does not sell to end-users directly, it is an excellent platform for branding.
