

TW PRODUCTS

Chain, Wire Rope & Rigging Hardware

Monthly Newsletter

TW Products attended The Utility Expo (TUE) on September 26-28 in Louisville, KY. TUE, which focuses on utility-related industries such as electricity, natural gas, water, and even telecommunications, is one of the largest trade shows of its kind in the nation. This year, it was expected to host over 19,000 attendees representing both domestic and international brands. TW Products was among the many exhibitors advertising merchandise for use in these industries, with the hope, as always, to form new business relationships in this field. TW Products also attended the Tennessee Tow

show on September 29-30 in Chattanooga, TN. As its name implies, the Tennessee Tow Show focuses on the towing and transport industries, where our products have already established a significant presence.

TW Products at TUE on the 26th of September in Louisville, KY

Upcoming Events

This coming month, we will send representatives to another pair of trade shows/expos. On October 15-18, Associated Wire Rope Manufacturers (AWRF) will hold its semiannual conference in Dallas, TX. Wire rope is one of the many types of products we offer, and as an AWRF member organization, TW Products takes pride in offering only the best in quality and safety. To close the month, starting October 31 and crossing over into November 2023's Specialty Equipment Market Association (SEMA) Show will be taking place in Las Vegas, NV. For attendees of the show who want to see a sample of our products and meet our representatives in person, we will be in the South Hall of the Las Vegas Convention Center, booth #36238. We hope to see you there!

REMINDER

TW PRODUCTS® is exhibiting at

Listed below are some fundamental safe rigging practices:

1. When rigging, ensure the load hook and upper suspension form a straight line. The chain or body of the hoist should never come in contact with the load.
2. Never tip-load hooks.
3. Always use a sling or lifting device to rig around loads and use engineered lift points for attachment.
4. Never work under suspended loads or lift loads over people.
5. Never lift people with a hoist.
6. When leaving the hoist unattended, land any attached loads.
7. When the job is complete, place the hoist and hook in a location that will not interfere with the movement of people or materials.

If you have any questions about our products WLL, MBS, or other measurements, please contact us at customerservice@twprod.com for more information.
