### Assemblies

Did you know we have a host of finished product assemblies?

We started doing assemblies for our customers in 2020 during the global pandemic to alleviate the labor shortage. We are skilled at making chain assemblies, web slings, steel & synthetic winch lines, and much more!

Want to streamline your supply chain further to reduce costs? [Contact us](#), and we will help put your products together.

Reflecting on this past month, we would like to highlight our vital organizational accomplishments. First, we enhanced our website by listing our additional capabilities to fulfill our customers' needs. In particular, we have added assemblies to our website under the Product category, showcasing the various assemblies we are capable of manufacturing. This ranges from chain, wire rope, web slings, winch lines, and more!

Secondly, our latest G100 fittings are on their way to our warehouse. The fittings include a G100 lifting chain, oblong/master link, clevis grab hook, swivel self-locking hook, clevis self-locking hook, and more. More importantly, all these products are painted or powder coated in our trademark color, chartreuse®, which means more visibility and better safety. Having these popular items in stock is essential to our customer service. This will enable us to fulfill customer needs effectively and efficiently.

Thanks for reading! As always, please feel free to contact us should you have any questions or concerns.
